Decoding customer value : A SQL- driven retention strategy

CONTENT

1.RETENTION PLAYBOOK

1.1 PROMO SUNSET PLAN

1.2 IDEAL CUSTOMER PROFILE

Retention Playbook: Strategic

Roadmap 1. Promo Sunset Plan (The Transition Strategy)

Objective: Systematically reduce discount reliance by transitioning from "Reactive Promotions" to "Value-Based Engagement".

Tactical Execution:

Phase 1: Tiered Reduction: Begin by reducing the frequency of site-wide discounts for "High Value" and "Mid Value" customers, replacing them with exclusive, non-monetary perks (e.g., early access to collections).

Phase 2: Segment Calibration: Use the Promo Sensitivity Analysis to isolate "Promo Hunters" and offer them decreasingly aggressive discount tiers over two quarters to test price elasticity without losing volume.

Phase 3: Organic Shift: Reinvest the saved promotional budget into regions identified as "High Organic Traction" in the Geographic Market Opportunity map to drive sustained acquisition.

2. Ideal Customer Profile (ICP)Based on our data engineering and segmentation, the ideal customer profile is defined as: Tenure Profile: Categorized as "High Tenure" (35+ previous purchases), demonstrating established trust in the brand. Behavioural Indicators: Low "Dependency Score" (purchasing primarily at full price) and high satisfaction ratings. Engagement Preference: High activity in core categories like Clothing and Footwear as evidenced in the Category

Retention Funnel. Acquisition Strategy: Target demographics that mirror the age and location characteristics of these "High Tenure" clusters, moving away from demographic segments that overindex on "Promo Hunter" behaviour.
